

Storm Surges Congress 2010

Risk and Management of current and future Storm Surges

It is a pleasure for LOICZ and GKSS together with a growing list national and international supporting partners and sponsors to announce the:

Storm Surges Congress
Risk and Management of current and future Storm Surges

at the University of Hamburg, Germany

13-17 September 2010

Deadline extended to 30th of April 2010! Because of numerous requests to extend our deadline for abstract submissions until after the Easter holidays, we have decided to extend our deadline until the end of April 2010. Therefore, if you still wish to present at the Storm Surges Congress, please feel encouraged to continue preparations and submit your abstract by the end of April.

Storm Surges Congress 2010 [low resolution - 465 KB]

Keep me informed with LOICZ RSS feed

Storm surges represent a major type of natural hazard, frequently causing substantial losses of lives and economic damages.

Besides climate change drivers, storm surges are exacerbated by anthropogenic forcing including intensive land and sea use along the river-coast continuum.

How do we deal with the present level of risk?

How do we respond to changing future conditions?

Answers require interdisciplinary approaches and to overcome the traditional fragmentation in scientific and coastal user discussions and management systems. We strongly encourage multiple stakeholders, coastal users and decision-makers, scientists, and particularly young colleagues from diverse fields of expertise, to participate with knowledge and share their experience.

Plenary sessions and moderated poster sessions underpinned by roundtable discussions should encourage cross-disciplinary exchange. The goal is also to provide useful outcome information subsequent to the

Congress in various forms of dissemination.

Please feel encouraged to forward this information to other interested parties.

The Congress is organized by LOICZ IPO and the Director Dr. Hans von Storch of the Institute for Coastal Research of the GKSS Research Centre in Geesthacht.

Support by:

Landesbetrieb
Straßen, Brücken
und Gewässer

Support By

Bundesanstalt für Wasserbau - Federal Waterways Engineering and Research Institute

University of Hamburg
